Lead Product Designer— at Novo App

Bio

Product Designer with 12+ years of experience in UI, UX, and Interaction Design. I create digital experiences that balance innovation, usability, and visual craft across mobile, web, TV, VR, and interactive environments.

I've led design initiatives for global organizations including Google, Logitech, AccuWeather, UC Berkeley, and HUGE Inc., bringing also strong front-end capabilities in HTML/CSS.

Passionate about AI-driven design processes, I'm a RARE with Google delegate and hold a specialization in Interaction Design from UC San Diego. I'm currently completing the NN/g training toward UX Certification.

Experience

Lead

Mar 2025+

In-house Lead Product Designer

Novo platform | www.novo.co | Remote work for NY Headquarters

Senior

Jul 2023 - Mar 2025

I lead end-to-end product design across web and mobile, owning key growth surfaces such as signup, onboarding, dashboard, and acquisition features. I work from discovery through delivery (User research, design systems, UI, prototyping, and handoff) while partnering closely with engineering, data, and marketing. I've also introduced AI-assisted workflows using tools like ChatGPT, MidJourney, Figma Make, and Lovable to speed up research, ideation, visual explorations, and prototyping.

Among several projects, I led the redesign of the first time experience flow (days 0 to 30), covering the signup process, post-application phase, first login, and early onboarding. Through user research, rapid prototyping, and A/B testing, we significantly improved engagement, acquisition, and attachment rates, with some key metrics increasing by more than 50% in the first month.

Senior

Feb 2023 - Jul 2023

Senior UX/UI Designer @Logitech | Patent pending

BairesDev | www.bairesdev.com | Remote work for NY Headquarters

I worked in the design of an audio mixing software for Logitech G in its initial version, contributing to an extensive research process, high-fidelity mockups, prototypes, and user testing. I collaborated closely with a cross-functional team of designers, developers, and a product manager to define the product's structure, interaction patterns, and visual direction.

Senior

Mar 2021-Feb 2023

Senior Visual Designer @Google @Accuweather @Credit Acceptance Corp

Huge INC | www.hugeinc.com | Remote work for NY Headquarters

Mid

Apr 2019 - Mar 2021

I contributed to large-scale digital products. My role combined interaction design, visual design, motion, design systems, and 3D work across web, mobile, and emerging platforms. I collaborated closely with multidisciplinary teams (UX, strategy, engineering, and creative leadership) to deliver high-quality experiences that aligned with each brand's identity while improving usability and performance across their digital ecosystems.

During my time there, I contributed to projects such as the Wear OS website redesign, Google TV web redesign, Chrome.com revamp, AccuWeather app redesign, and the creation of the With Google Built-In Auto website. This work strengthened my ability to design for complex products, maintain consistency at scale, and drive creative excellence within fast-paced, global teams.

Experience

Mid

Jun 2015 - May 2019

In-house Visual Designer

Bizagi | www.bizagi.com | Hybrid work for London Headquarters

I contributed to a wide range of product and marketing initiatives. My role spanned web design, editorial work, email design, and front-end development. I produced high-quality mockups and final assets using tools like Sketch, XD, and InVision, and collaborated closely with marketing, product, and engineering teams to ensure consistency and alignment across Bizagi's digital ecosystem.

In addition to designing web interfaces, I developed and optimized email templates using ClickDimensions and Marketo, testing them for responsiveness, rendering, and personalization with tools like Email on Acid. I also handled front-end implementation (HTML, CSS, JS), SEO optimization, and web updates across platforms such as Joomla, WordPress, and Marketo.

John Chang ✓

Senior Product Designer @ Netflix

October 14, 2025, John worked with Mayck on the same team

"... he is the type of designer that will push beyond the brief and get to the root of the requirements to make sure his solutions aren't just bandaid fixes... He's leveled up our design process and language throughout our time working together, and I've been inspired by his creativity and eye for detail."

Amar Mehta ✓

XFN Program Management & Product Strategy

June 25, 2021, Amar worked with Mayck on the same team

"...Mayck and I worked on many projects together with the AccuWeather and Google clients. He was always known as someone who is not only reliable, but also delivers at premium quality every time."
